I didn't fail the test, I just found 100 ways to do it wrong.

— Benjamin Franklin

Playtesting guidance (GLUGG)

Luke Corey ◦ Michealmas Term 2026

Thank you for offering to playtest for us! This short document contains important information for your playtesting experience.

There are two "sections" of giving feedback: the **Head**, and the **Tails**. All feedback should be submitted through the following Google form:

https://forms.gle/WwR3wBshCeALnC16A.

The rest of the document is to give information about the form. Hopefully it is self-explanatory, but the rest of this document is a first port of call in case you are unsure. Failing that (or if you'd prefer to just ask, which is completely fine!), please feel free to reach out.

1. Head

The **Head** submission is just to give us a bit of information about you.

As part of this submission, you will need to complete the Calibration. This is a twenty-minute multiple choice test with ten questions. Your goal is to maximise your score as best as you can (without cheating). We expect that you will *not* complete all of the questions in the time given!

2. Tails

A **Tail** submission is to give feedback to a question according to its corresponding *question code*: these may look like [AN1], [BL2a], [CL3aii], and so on and so forth. The code will always be on the left-hand side of the page (either in the margin, or acting as a bullet point).

When giving feedback for numerical-, estimathon-, and multiple choice-style questions, you only need to submit one form for the question.

When giving feedback for long-style problems, you should submit one form for each part, and if you want, one for the overall question. Sometimes there will be very little to say (e.g., if the part is especially short). In these cases you can (and should, for your own sake!) be brief.

2.1 Question types

There are four types of OMTC questions:

- **Long-style.** A long-style question requires written responses, with working. Parts later in the question typically build off of parts earlier in the question, however sometimes later parts can be solved independently of earlier parts. The whole question should take about 45-60 minutes to solve.
- **Numerical.** A numerical question is a question whose final answer is a non-negative whole number. Each numerical question should take about 5-10 minutes to solve (sometimes less, depending on the question, but hopefully not more).

Some numerical problems are *chained*, which means they might be related to one another in some way. All other numerical problems are *standalone*, which just means they are not related to any other problems.

- **Estimathon.** A numerical question is a question whose final answer is of the form $a \times 10^b$, where $1 \leq a < 10$ and b is any whole number (possibly 0 or negative). Your goal is to estimate the actual value of the answer as best as possible.
- **Multiple choice.** Hopefully this is self-explanatory!

2.2 Working

It is incredibly useful for us to have your working and solutions to the problems.

Scan your working as **one** PDF file. For a long-style problem, submit all of the working in one of your forms, rather than one for each part.

Both the Apple Store and the Play Store have *Adobe Scan*, whose free version is a perfectly serviceable PDF scanner without ads.

3. Compensation

We would like to compensate you for your time! This year, we got more sign-ups for playtesting than we expected, and we have a finite budget, so unfortunately we must be fairly stringent with compensation. So, the rules are as follows:

- When we offer you a set of questions to playtest, we will offer a certain amount in compensation in the form of a voucher (often a Taylors or Blackwell's voucher, to your preference). Submit satisfactory feedback[1] to all of the questions in the set, by the deadline given, to be compensated the full amount offered.
- You are also very welcome to give a partial attempt to a set of questions. In this case, we will compensate proportional to the number of points a question is worth (shown on the right-hand side with square brackets). Namely, this compensation will normally be

$$\frac{\#\text{ of points across feedback submitted}}{\text{total }\#\text{ of points in question set}} \times \text{compensation offered}$$

  however for incomplete attempts (e.g. for only solving some parts of a long-style question) we will compensate at our discretion.[2]
- Feedback submitted past the deadline will be compensated at our discretion. It may be partially compensated.
- If the amount to be compensated is below a voucher's minimum spend, then this amount will roll over to the next set of compensation which we can offer you.

[1] For example, for feedback to be satisfactory, it is sufficient to give a couple of relevant points in each of the WWW and EBI boxes.

[2] N.B. an incomplete attempt is different from an incomplete solution – you do not have to completely solve the problem to be able to provide feedback!
